

“For those who are not very familiar with the technology, the problem might seem a bit odd at first. After all, car starter starts cars and dishwasher wash dishes, but plagiarism detector doesn’t actually detect plagiarism. Instead, they actually identify fragments of identical text.”

Today, there are a variety of techniques for doing that, but the end results are almost always the same. A plagiarism software processes the text to find matching sections of words between the documents it is processing and the ones it has indexed in its databases. This is true for most plagiarism test tools such as the plagiarism detector free online tool offered by Small SEO Tools.

Most of the plagiarism detector tools work on the same plagiarism test principle and basically function very much the same as Google or any other search engine works to find the matching words or phrases in other sources and provides the best results, sometimes along with the plagiarism checker percentage.

To check paper for plagiarism by hand is practically impossible, and this is what makes any plagiarism software so powerful for all the sources it can check. Nonetheless, there could be some blind spots as well; however, these blind spots are only an issue if people are not well aware of the potential blind spots or they don’t know how to use a plagiarism tool properly.

The article you submit to our free online plagiarism checker for students and teachers is scanned carefully, and so is the World Wide Web. It’s very likely you’ll see some red in your results as common phrases may trigger red flags. If there are complete sentences that aren’t original, Plagiarism Checker will identify the original source of any unoriginal or plagiarized content that was copied from the internet.

The Directive on Copyright and its most controversial component, Article 13, requires online platforms to filter or remove copyrighted material from their

The [solar wind](#), a stream of charged particles flowing outwards from the Sun, creates a bubble-like region in the [interstellar medium](#) known as the [heliosphere](#). The [heliopause](#) is the point at which pressure from the solar wind is equal to the opposing pressure of the [interstellar medium](#); it extends out to the edge of the [scattered disc](#). The [Oort cloud](#), which is thought to be the source for [long-period comets](#), may also exist at a distance roughly a thousand times further than the heliosphere. The Solar System is located in the [Orion Arm](#), 26,000 light-years from the center of the [Milky Way](#) galaxy.
